INTRODUCTION

The Individual Tax Model consists of file of 91,484 Federal tax returns subsampled from the Statistics of Income sample of over 250,000 Forms 1040 and 1040A filed for 1968. This file is used in conjunction with (1) a generalized manipulation program designed to select, compute, compare, arrange, and recode the data in the input file, and (2) a table generator program that will select, weight, and tabulate specified items in the manipulated input file and provide for stub and column identification in a flexible print format.

The Tax Model file, which is designed to simulate the administrative and revenue impact of tax law changes (as well as to provide general statistical tables), can be used by government or private researchers in two ways:

- (1) The user can specify in writing the types of manipulations to be made and outline the format of the tabulations measuring these changes. If the Service determines that the specifications can handled using the Model's programs, the IRS will prepare tables on a reimbursable basis insofar as the job does not interfere with the regular statistical processing.
- (2) The user may purchase the Model file and develop his own programs to manipulate the data and/or produce the desired tabulations.

This general description provides an explanation of the codes and items, the file layout, sample counts and weights, technical specifications concerning the tapes (for those who wish to purchase the file), and facsimiles of Federal tax return forms for a reference to the line items which were abstracted for the 1968 program.

7	Salaries and wages line 5, Form 1040 and Form 1040A.
8	Total income (AGI+)line 9, Form 1040; line 7, Form 1040A.
9	Total loss (AGI-)line 9, Form 1040.
10	Total deductions—in conjunction with the "Form of deduction" code (field 0, column 4), this figue is: line 11a of Form 1040 returns with adjusted gross income \$5,000 or more; or the amount computed based on the tax reported, for all Forms 1040A and Forms 1040 with adjusted gross income under \$5,000 where the taxpayer used the "Tax Table." The amount of total deductions on many nontaxable returns exceeds adjusted gross income reduced by the amount of exemptions. A few separate returns (marital status code 3) are coded as itemized deduction returns yet they have no total deductions reported. In such cases, it is assumed that the other spouse itemized and claimed all the deductions.
11	Taxable incomefor itemized deduction returns, line 11d of Form 1040. For Form 1040 returns with adjusted gross income \$5,000 or more and with the standard deduction, line 11d. For all other Form 1040 returns, and all Form 1040A returns, taxable income was computed based on the appropriate marital status and type of standard deduction (minimum or 10 percent).
12	Tax before income averagingfor returns with tax computed using income averaging (tax status codes 2, 4, 7, and 9), this is the amount of tax which would have resulted if income averaging was not used.
13	Tax savings, income averagingfor returns with tax computed using income averaging, this is the difference between field 14 and field 12.

<u>Field</u>	Explanation
14	Income tax before creditsline 12a, Form 1040; line 8a, Form 1040A. For Forms 1040, the tax was the result of (1) the regular tax computation (tax status codes 1 and 6), (2) the alternative tax computation (tax status codes 3 and 8), (3) income averaging (tax status codes 2, 4, 7, and 9), or (4) application of rates in effect prior to 1965 on certain prior-year delinquent returns (sample codes 09 and 19). The tax reported by the taxpayer computed under (1) and (2) above was accepted if within a tolerance of \$\frac{1}{2}\$ percent of actual. If the reported tax was outside the tolerance, the tax was recomputed, and if necessary the tax status and/or marital status codes were changed. The tax reported by the taxpayer computed under (3) and (4) above was generally accepted without change.

SAMPLE DESCRIPTION

The 1968 Individual Tax Model file is a random subsample of 91,484 returns selected from the Statistics of Income sample of over 250,000 Forms 1040 and 1040A for 1968. Since the Model sample is about one-third the size of the full sample, the relative sampling variability of estimates derived from the Model can be expected to be somewhat less than twice that of similar estimates produced from the larger sample. A description of the Statistics of Income sample, as well as measures of sampling variability for selected estimates, are shown in the complete report, Statistics of Income--1968, Individual Income

The Model sample was designed to produce National estimates. Although it is possible to identify returns for each State by use of the IRS District code, we do not recommend that the Tax Model file be used to provide subnational data. The number of returns (in the sample) for each State are insufficient to provide reliable estimates for most items; therefore, no separate sample weights were calculated for each State (or District).

Sample counts and weighting factors for the Model file are shown on the next page. The sample code identifies the stratum from which a return was selected and indicates the weight factor to be applied to that return.

Because of the way returns are processed prior to sampling, there are a few cases where the adjusted gross income is outside the range for the sample code assigned. Similarly, a few returns with business schedules (Schedules C or F) are classified in nonbusiness sample codes, and vice versa. However, in all cases, the sample code assigned to the return is governing and should not be changed.

TECHNICAL DESCRIPTION OF THE FILE

Each "data record" in the file, representing one tax return, is composed of one hundred twenty (120) 10 digit, fixed point, numeric words. "Logical tape records" are made up of 5 data records and are separated by a 3/4 inch "inter record gap" (IRG). There is no special indication of the end of a logical tape record other than the IRG, and no indication of the end of a data record.

Data are recorded at a density of 800 bits per inch on standard 2,400 1/2 inch, 7 channel, mylar tape in Binary Coded Decimal (BCD) notation with both horizontal and vertical even parity. Each logical tape record is preceded by a Delta (CB8421 in BCD). Numeric words are 10 or fewer characters because zero suppression eliminates up to 5 non-significant high order zeroes per word. The end of a data word is recognized by the zone bits in the units position.

Header and trailer labels are 80 alphameric characters in length. Alpha words are 5 characters in tape. No deltas precede tape labels. The last reel of the file carries an end-of-file (EOF) indication in the second, third, and fourth characters of the trailer label. All other reels carry an end-of-reel (EOR) indication in the same positions.

The file was created using IBM 729-V Tape Drives.

INSTRUCTIONS (Continued

Column I of Part II, section 1250 property only.—If held for more than 6 months, but not more than 1 year, enter the smaller of (1) column h, or (2) column f-2.

If held for more than 1 year, enter the result of multiplying the

smaller of (1) column h, or
(2) column f-2 less the amount of depreciation computed for the same period using the straight line method

by the percentage obtained by subtracting from 100%, one percentage point for each full month held in excess of 20 months.

Where substantial improvements have been made within the preceding 10 years, see section 1250(f).

Basis.—In determining gain or loss use cost, except as specially provided. The basis of property acquired by gift after December 31, 1920, is the cost or other basis to the donor in the event of gain, but, in the event of loss, it is the lower of either such donor's basis or the fair market value on date of gift. If a gift tax was paid with respect to property received by gift, see section 1015(d). Generally, the basis of property acquired by inheritance is the fair market value at the date of death. For special cases involving property acquired from a decedent, see section 1014.

Installment sales.—If you sold personal property for more than \$1,000 or real property regardless of amount, you may be eligible to report any gain under the installment plan if (1) there is no payment in the year of sale, or (2) the payments in the year of sale do not exceed 30 percent of the selling price. The election must be made in the year of sale even though no payment was received in that year. See section 453

For treatment of a portion of payments as "unstated interest" on deferred payment sales, see section 483.

Sale of personal residence.—Tax on a portion or all of the gain from the sale of your principal residence may be deferred if:

- (a) within 1 year after (or before) the sale, you purchase another residence and use it as your principal residence; or
- (b) within 1 year after (or before) the sale, you begin construction of a new residence and use it as your principal residence not later than 18 months after the sale.

If you sold property for \$20,000 or less on or after your 65th birthday which was owned and used by you as your principal residence for at least 5 of the last 8 years any gain on the sale need not be included in income. If the property was sold for more than \$20,000 part of the gain must be taken into income. Publication 523, Tax Information on Selling Your Home, is available at the District Director's office.

Nonbusiness debts.—If a debt, such as a personal loan, becomes totally worthless within the taxable year, the loss resulting therefrom shall be considered a loss from the sale or exchange, during the taxable year, of a capital asset held for not more than 6 months. Enter such loss in column (i) and describe in column (b), Part I. This does not apply to: (a) a debt evidenced by a corporate security with interest coupons or in registered form and (b) a debt acquired in your trade or business.

Limitation on allowable capital losses.—If line 10, Part I, shows a net loss, the loss shall be allowed as a deduction, only to the extent of the smaller of (1) line 11b (or line 9 if tax table is used), page 1, Form 1040 computed without capital gains (losses), or (2) \$1,000. The excess of such allowable loss over the lesser of items (1) and (2) above is called "capital loss carryover." Any such carryover loss may be carried forward indefinitely. Capital losses retain their character as either short-term or long-term when carried over to the succeeding year. To the extent the net capital losses are deducted from ordinary income, the net short-term capital loss must deducted from ordinary income, the net short-term capital loss must be considered as deducted first.

Losses in transactions between certain persons.-No deduction is allowable for losses from sales or exchanges of property directly or indirectly between (a) members of a family, (b) a corporation and an individual (or a fiduciary) owning more than 50 percent and an individual (or a nauciary) owning more than 50 percent of the corporation's stock (liquidations excepted), (c) a grantor and fiduciary of any trust, (d) a fiduciary and a beneficiary of the same trust, (e) a fiduciary and a fiduciary or beneficiary of another trust created by the same grantor, or (f) an individual and a tax-exempt organization controlled by the individual or his family. Partners and partnerships see section 707(b).

Long-term capital gains from regulated investment companies.—Include in income as a long-term capital gain the amount you are notified on Form 2439 which constitutes your share of the undistributed capital gains of a regulated investment company. Include the tax paid by the company as shown on the Form 2439 with the amount claimed on Form 1040, page 1, line 19. Add to the basis of your stock, the excess of the amount included in income over the credit.

Losses on small business stock.—If you had a loss on section 1244 stock which would (but for that section) be treated as a loss from the sale or exchange of a capital asset, it shall be treated as a loss from the sale or exchange of an asset which is not a capital asset to the extent provided in that section. 16--80198-1 GPO
